AIMCAT 1813 Analysis

Section I - VERBAL ABILITY & READING COMPREHENSION

With higher difficulty level of both VA & RC, this particular AIMCAT followed the trail of few of its predecessors. With just about 12 questions in the medium difficulty range, the paper would have taken many by surprise. However, the key to success in a section of such a nature was to focus on accuracy and not to panic. In simple words, the best strategy in such cases is to hit as close to 100% in terms of getting the answer right of whichever questions are attempted.

The RCs were moderately lengthy with words ranging between 400 and 800 words. Somebody who is well read and has a decent reading speed, might have found RCs to be somewhat manageable.

Question number 1, 2, 3, 7, 8, 9, 10, 11, 13, 14, 16, 17 were the ones falling under medium difficulty level. The rest of the questions were either difficult or very difficult.

85	30

ection II - DATA INTERPRETATION & LOGICAL ABILITY

The DILR section again did not have much to offer. With the average difficulty level hovering from difficult to very difficult, this sections would also have tested the patience and the resilience of many a student. Nevertheless, the key to success in this particular section was to stay positive and determined. If somebody could identify and filter out the easier questions, would have won half the battle in this section.

Section III - QUANTITATIVE ABILITY

With QA being relatively easiest of the three sections, the test takers should have used this section as an overall score booster as well. With about 15 questions as easy or medium difficulty level ones, the key in this section was again to have an eye for such questions. This particular section had a good mix of conceptual, calculative and sitters. In terms of difficulty, question number 1, 2, 3, 4, 5, 8, 11, 11, 15, 22, 24, 25, 28, 29, 32, 34 were the easy/medium difficult ones.
